VeriTest

Automated Student Testing and Reporting System

Digital Documents is proud to offer school districts a complete, non-proprietary, cost effective test creation and grading system. Our solution is a perfect replacement for high cost, non-flexible legacy testing systems that force you to use their high cost standardized forms and scanning equipment in order to automate the test grading process.

Our solution allows for complete in-house control of system administration, test creation, printing, scanning and scoring via an easy to use web-based user interface and any network-enabled Multi-Function Device (MFD) device. The VeriTest solution reduces costs while adding functionality and control.

The advantages are endless!

No more costly proprietary forms to be purchased from the manufacturer

Tests can be printed out on standard paper at incredibly less cost

No more confinement to limited test form choices

Since you have complete control over the test form "look and feel", there are limitless choices for customization, including school logos, styles, and layouts

No more costly proprietary test scoring devices

Any network-enabled Multi-Function Device (MFD) can be utilized for test scoring.

How Does it Work?

VeriTest is a centrally administered, Windows server-based application offering remote access via any thin client web browser. An end user or system administrator can log into the system using their email address and password credentials. Then, based on user account permissions, perform the following:

- Create new exam forms
- Print out exam forms on local Multi-Function Devices (MFD's)
- Create exam score key
- Grade exams
- Run reports on student testing performance
